Eye Tracking of Toddlers - Dr. Rojahn's Lab

By Rekha Sharma

The aims of this study are to replicate findings of differences in gaze patterns of children during social and non-social situations. We are currently using sophisticated eye gaze equipment (see image) to examine if children with autism show visual preference for non social stimuli as compared to typically developing children.

The eye gaze equipment looks like a regular computer monitor, but there is a concealed camera at the bottom of the screen that follows the eye movements of the viewer. This is a much-appreciated upgraded edition of the hardware, since in previous versions, the participant's head had to remain very still to record eye movements. A chin or forehead rest was needed to remind the child not to move. This proved challenging to use in an atypically developing population.

Preschool Teachers' Beliefs about Emotion - Dr. Denham's

By Kate Zinsser

Dr. Denham's lab is currently involved in a 4-year IES-funded study: Teachers as Socializers of Social Emotional Learning (TASSEL). This study will examine the preschool teacher's role in helping their students develop social and emotional competence as they prepare to move into kindergarten. TASSEL will involve approximately 400 children in 80 preschool classrooms. Teachers will be observed in their classrooms, asked to complete self-assessment questionnaires, participate in focus groups, and record themselves reading emotion-laden picture books. Children's emotional and social competence will be studied at the beginning and end of each school year via live and computer aided assessments.

"When did you first notice he had the blues?"

Eye Tracking of Toddlers - Dr. Rojahn's BADD Lab

Continued from Page 1.

The most rewarding aspect of this research is seeing just how different the two viewing patterns are for these children. The fascinating behavioral discrepancies emphasize possible differential neurological patterns and suggest many areas for intervention. The most challenging practical aspect of data collection is the calibration. Trying to get a toddler to sit still in a chair, follow directions on a screen, and let the eye tracker track their eyes is not exactly easy.

Preschool Teachers' Beliefs about Emotion - Dr. Denham's Lab

Continued from page 1.

Specifically, Liz Shewark and I are working most intensely on the qualitative aspects of this study. We have conducted focus groups with nearly 40 teachers this Winter and will be analyzing the data for indications of teacher perceptions of their roles in the socialization of emotions, strategies they use, and the impacts of their own emotional competence on child development. This foray into qualitative data collection and analysis has already broadened my horizons and has led to a plethora of additional research questions.

Assessing Classroom Quality - Dr. Curby's Lab

By Noora Hamdan

This past January, my advisor asked me if I would like to be involved in collecting data using the CLASS (Classroom Assessment Scoring System) measure to assess classroom quality. I had read about the measure quite a bit before this, and I was very excited about being trained in it, and going out into the field (classrooms) and actually observing.

I was also especially excited because the data we were to collect had the potential of having many applications for many different research projects. What I enjoyed most was actually being in a real data collection environment, where things don't always go as planned, requiring one to think quickly and be flexible.

While I enjoyed being in the field, this was also challenging. As one can imagine, the simple fact that we were collecting data in a classroom environment introduced many possibilities for unforeseen disruptions in data collection. Overall, it was exciting and enlightening to be in typical and busy classrooms, assessing their quality.

Through this experience, I gained an appreciation for measures like the CLASS, designed to yield important data in a complex environment. Using it in the field inspires one to think creatively about various means by which we might effectively measure different dimensions and levels of teacher- child interactions.

Upcoming Graduates: Descriptive Statistics

Of our upcoming MA graduates, the majority are continuing on to PhD programs, and a smaller number of students are entering the workforce while getting further certifications, such as sitting for their Board Certified Behavior Analyst (BCBA) exam.

Dissertation & Theses Announcements

April

Nicole Fettig - Children's Emotion Regulation During a Disappointment: The Moderating Roles of Emotion Reactivity and Gender

Helyn Kim - The Relations Between Motor, Social, and Cognitive Skills in Young Children with Developmental Disabilities

Liz Shewark - The Influence of Interparental Conflict on Child Willingness to Forgive

May

Alicia Borre - Long-Term Outcomes of the Early Authors Program

Andrea Burchfield - The Behavior Problems Inventory-Short Form (BPI-S): Reliability and Validity

Aaron Deutsch - Longitudinal Motivational and Self-Regulatory Predictors of Academic Retention and Graduation in First-Year College Students

Deepti Gupta - Cultural Differences in Maternal Emotion Socialization of Anxiety and Anger in Young Children

Lindsey Hutchison - Relations between executive functioning, second language fluency, and externalizing behavior problems in early childhood

Beckie LaRocque - Parent-child interaction, scaffolding, private speech, and executive performance among children with ADHD or high functioning autism

Susan VanDerhei - Non-Suicidal Self-Injurious Behavior: The Role of Shame, Guilt, Anxiety and Depression

Spring Colloquia Series is Underway!

All colloquia are located in **Engineering 1110 @ 12:00pm** unless otherwise noted.
All members of the GMU community are welcome to attend.

Immigrant Families' Experiences with Early Childhood Care and Education

First Year's First Reactions

"I found my first semester of graduate school to be extremely successful overall. I came in excited, yet, a bit uneasy, as I did not know what to expect, in terms of what the graduate courses, and general academic atmosphere would be like. After completing my first semester, I can now say, that, while there were moments of stress (mostly because of the novel nature of being in a graduate program), I have already learned so much. I have gained a clearer understanding of where my research interests lie. I have formed great relationships with our supportive faculty and fellow students. Most importantly, I have become more excited to continue my education and cannot imagine doing anything else, anywhere else.

That aspect of graduate school which I am most satisfied with is the lab setting I am in. Coming into graduate school, I knew that my advisor would be supportive and approachable. However, I was unsure about more advanced students in the lab. I can honestly say that I have learned as much from them as I have in my classes and from my advisor. They are very supportive and helpful, in every sense; from answering my silly questions, to offering more in depth guidance and advice."

"I have met a lot of people who are enthusiastic about developmental psychology. All of our interests may not be the same, but they are all about the same goal: furthering the science. It is nice to be in an environment where people care about school and understand what they need to do to earn this degree. Working in the lab with Dr. Denham this year has been very exciting as she is starting on the ground floor of her new grant. I was able to see all the components that go into starting a project, and although it is a lot of work, it is really neat to come together as a team and contribute our parts."

"The first semester was great. I loved my lifespan development class, loved statistics with Patrick McKnight, and appreciated seminar. The professors make the transition to graduate school easier and are available as resources. The other students in my lab have been helpful and also make great resources."

"I feel very happy to have the opportunity to study in the ADP program. The classes, peers, and environment are all very good. I participated in some programs in my advisor's lab in the semester of Fall 2011 and I earned a lot. I'm planning to attend the Eastern Psychological Association (EPA) conference next month. I have not submitted any manuscripts so far. I worked on a research project in an elementary school investigating how patterning improves children's academic performance."

"Working in the undergrad advising office has been a great opportunity to encourage undergraduate students to become involved in research and to apply to graduate schools. It's nice to have advice to give after having already gone through the process, and I'm looking forward to being able to help next year's class of first years."

Conference Reminder: SRCD

Society for Research in Child Development Biennial Meeting
April 18-20, 2013 Seattle, Washington
Application Deadline: Thursday, September 20, 2012, 11:59 PM EDT

“The [SRCD] hosts a biennial meeting in the spring of odd numbered years with attendance in excess of 5,000. These internationally attended meetings include individual research reports, symposia, invited lectures, and discussion sessions, among other timely and historical programs.”

This is one of the biggest conferences in our ADP field, and GMU typically has great attendance! So mark your calendars and finish that research!

For more information, visit www.srkd.org.

Travel Funding

If you plan on applying for financial support for conference travel, you have 2 options:

- 1) The **Graduate Student Travel Fund**: You may apply for one conference per fiscal year. *Before you travel* you must submit all application forms and instructions that can be found on the GSTF website (<http://www2.gmu.edu/org/gstf/pdfs/application.pdf>). Be sure to **MAKE COPIES** of everything you submit.
- 2) The **ADPSG Travel Fund**: The student group has a limited amount of funds with which to assist students. In order to qualify for these funds, you must notify the ADPSG Treasurer (Grace Howarth; ghowarth@masonlive.gmu.edu) of your intention to travel to any conference for the academic year in the FALL semester. Grace will send out a reminder email and deadline date in Fall 2012.

Additional information regarding travel funding is available at the ADPSG website (<http://www.gmu.edu/org/adpsg/travel.html>)
