OR/SYST 488/588: Financial Engineering I
Introduction to Options, Futures, and Derivatives

Spring 2018

George Mason University
Department of Systems Engineering and Operations Research

Instructor: KC Chang
Office: Engineering Building, Room #2235
Phone: (703)993-1639; Fax (703)993-1521
Email: kchang@gmu.edu

Class Hour: Tuesday 4:30-7:10 PM, Eng #1110
Office Hour: Tu. 12:30-2:30 PM, or by appointment

TA: Michael Perry, mperry20@gmu.edu, Office Hour: Wed. 4:30-6:30 PM

Course Description: This course is an introduction to financial engineering. Financial engineering is a cross-disciplinary field which relies on mathematical finance, numerical methods, and computer simulations to make trading, hedging, and investment decisions, as well as facilitating the risk management of those decisions. This course will introduce basic types of derivatives, such as forward, futures, swaps, and options; as well as financial models such as geometric Brownian motion, Ito's formula, and Black-Scholes model. Numerical methods for option pricing, such as Binomial tree and Monte Carlo simulation will also be covered. While mathematics is indispensable in financial engineering, this course will try best to focus on the concepts and ideas of finance, while limiting the math within a scope acceptable to most students in engineering.

Prerequisites: Graduate standing (Undergraduate engineering math: Calculus, probability theory, and some basic computer programming skills. Some background in stochastic process and differential equation would also be helpful.)

For undergraduate students: STAT 344 or equivalent.

**Optional Readings:**

**Assignments and Exams:**

There will be five hand-in assignments during the semester, a mini term project, as well as a mid-term exam and a final exam, both in-class. The exams will not be open book. However, you will be permitted a two-sided “cheat sheet” with notes and/or formulae.

**Grading:**

The assignments, mini project, mid-term, and final exams constitute 25%, 20%, 25% and 30% of the grades respectively.

**Schedule:**

Unit #1: Introduction; Chapter 1
Unit #2: Futures markets; Chapter 2
Unit #3: Hedging Strategies using Futures; Chapter 3
Unit #4: Interest Rates; Chapter 4
Unit #5: Determinations of Forward and Futures Prices; Chapter 5
Unit #6: Interest Rates Futures; Chapter 6
Unit #7: Mid-term exam
Unit #8: Swaps; Chapter 7
Unit #9: Properties of Options; Chapters 10-11
Unit #10: Trading Strategies and Binomial Trees; Chapters 12-13
Unit #11: The Black-Scholes-Merton model; Chapter 14-15
Unit #12: Options on Stock indices, currencies and futures; Chapters 17-18
Unit #13: The Greeks; Chapter 19
Unit #14: Volatility Smile; Chapter 20
Unit #15: Review of Course; Term project presentation
Unit #16: Final exam
